MATTERID

Every matter. Everywhere. In a single scan.

Pinpoint and classify every matter file outside your DMS using your firm's intake and billing data to eliminate matter-related risk and cost.

Your matters don't just live in the DMS.

Governance shouldn't stop at your DMS. Every matter results in files being created and stored across SharePoint, Teams, OneDrive, file shares, and email, creating terabytes of dark data that put your firm at risk.

Matter data is everywhere

Up to 80% of matter content sits outside your DMS, rapidly proliferating with every email, Teams message, and copied file.

Searching one matter at a time doesn't scale

Existing approaches require a search per matter. Firms have hundreds of thousands of matters. None of it scales.

Manual processes can't keep pace

Even when files are found outside the DMS, each one needs to be confirmed and correlated to a matter, creating firefighting instead of active, ongoing governance.

The stakes keep rising

AI initiatives are accelerating and need clean data. Client audits and OCGs are more stringent and frequent. Attorney mobility is constant. The cost of inaction has hit a tipping point.

Where law firms put MatterID to work

Matter-based cleanup

Enable defensible disposition by identifying stale, duplicate, and low-value content from matter data.

Matter disposition and retention

Surface every expired, closed, or aging matter in a single query. Enforce retention rules consistently and produce the audit trail to support decisions.

Enterprise data curation for AI

Prevent your AI from accessing privileged, sensitive, duplicative, and stale matter content to power safe, accurate outputs.

Attorney offboarding

Streamline matter mobility by discovering and classifying unstructured content stored inside and outside the DMS.

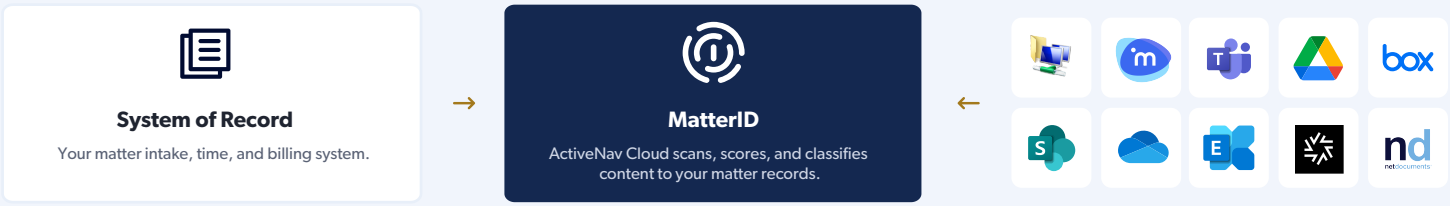

Client audits and OCG compliance

Respond faster and more defensibly to client and regulatory audits with clear metrics and reports.

ACTIVENAV

How MatterID finds matters no one else can.

Most discovery tools can plug into a repository and surface content. None integrate with your firm's systems of record data to build a custom identification model and apply that intelligence across every unstructured repository to match content with it's associated matter. MatterID does.

One scan. Every repository. All your matters.

Your source data. Your matters. Your insights.

Integrate with your systems of record data

With MatterID, ActiveNav Cloud uses your firm's matter intake, time, and billing system data to intelligently discover matters outside the DMS.

Scan every repository

File shares, SharePoint, Teams, OneDrive, iManage, NetDocuments, Exchange, and more. Connect to every platform your firm uses at petabyte scale.

Match content to matters

Using metadata, content, and your firm's own identifiers, each discovered file is classified and matched to its associated matter.

Matter-level insights and defensible decisions

Instantly filter, review, and prepare your firm's most critical data for disposition.

Trusted by legal teams worldwide

25+
Petabytes of data discovered
Delivering visibility and control across even the largest unstructured data sets

8M
Files per hour discovered
Rapidly locate unstructured content across your entire data estate

300+
Organizations served worldwide
Successfully helping top law firms, corporate legal teams, and other organizations achieve Zero Dark Data

Built on Snowflake | ISO/IEC 27001:2022 Certified | Data never leaves your control

Ready to take control of your data?

Join leading law firms and corporate legal teams who trust ActiveNav Cloud to discover and classify their unstructured data with confidence. Request a personalized demo and see what curated, AI-ready data looks like at your firm.
